The key highlights of the report include:

Market Overview (2018-2028)

Historical Market Size (2022): USD 9.79 billion

Forecast CAGR (2023-2028): 7.5%

Night Vision Devices Industry Definition and Major Segments

A night vision device allows you to see in the dark and is used for safety in low-light situations.

Multi-spectral imaging, optical guiding, and eye tracking are all possible with these devices, which are highly optoelectronic. They're used in the fields of navigation, surveillance, and targeting.

The night vision market can be divided based on segments like type, technology & end use.

Based on type:

- Goggles
- Cameras
- Scopes
- Others

Based on technology:

- Thermal Imaging
- Image Intensifiers
- Infrared Illumination

Based on end use:

- Military Segment
- Civil Segment

### Night Vision Devices Market Trends

In many countries around the world, government organisations are upgrading their weapons and devices to improve navigation, surveillance, and targeting capabilities. As a result, the demand for such devices grows, resulting in a larger market for night vision devices. Increased defence budgets have resulted from increased demand for night vision devices in combat and patrolling operations. It is also expected to provide better opportunities for manufacturers as a result of the government's increased investment in R&D night vision technology.

Increased geopolitical tensions and territorial conflicts have necessitated the use of advanced electronic equipment, such as night vision devices, to improve vigilance and surveillance in military areas. The night vision devices provide colour images to soldiers in low-light situations in the field. In recent years, these devices have gained popularity among wildfire researchers, which is expected to increase demand for them. The demand has also been propelled by technical and application feasibility, such as head-mounted night vision, combined with a reasonable price. As a result, manufacturers are constantly improving the functionality and design of cameras used in night vision devices in order to increase their effectiveness.

Furthermore, due to the high influx of refugees and immigrants, as well as increased cross-border operations, the use of night vision devices in border security has increased.

### Key Market Players

The major players within the market are ATN Corp., Elbit Systems of America and others. The report covers the market shares, capacities, plant turnarounds, expansions, investments and mergers and acquisitions, among other latest developments of those market players.

### About Us :

Expert Market Research (EMR) is leading market research company with clients across the globe. Through comprehensive data collection and skilful analysis and interpretation of data, the

company offers its clients extensive, latest and actionable market intelligence which enables them to make informed and intelligent decisions and strengthen their position in the market. The clientele ranges from Fortune 1000 companies to small and medium scale enterprises.

EMR customises syndicated reports according to clients' requirements and expectations. The company is active across over 15 prominent industry domains, including food and beverages, chemicals and materials, technology and media, consumer goods, packaging, agriculture, and pharmaceuticals, among others.

Over 3000 EMR consultants and more than 100 analysts work very hard to ensure that clients get only the most updated, relevant, accurate and actionable industry intelligence so that they may formulate informed, effective and intelligent business strategies and ensure their leadership in the market.
