

Tidal.Cloud Unveils Enhancements to IP Address Management Solution

Tidal.Cloud recently revealed its latest innovations for LightMesh, its enterprise IP address management (IPAM) solution.

TORONTO, ONTARIO, CANADA, August 28, 2023 /EINPresswire.com/ -- [Tidal.Cloud](#) recently revealed its latest innovations for LightMesh, its enterprise IP address management (IPAM) solution.

Import Excel and CSV Data With New Spreadsheet Upload

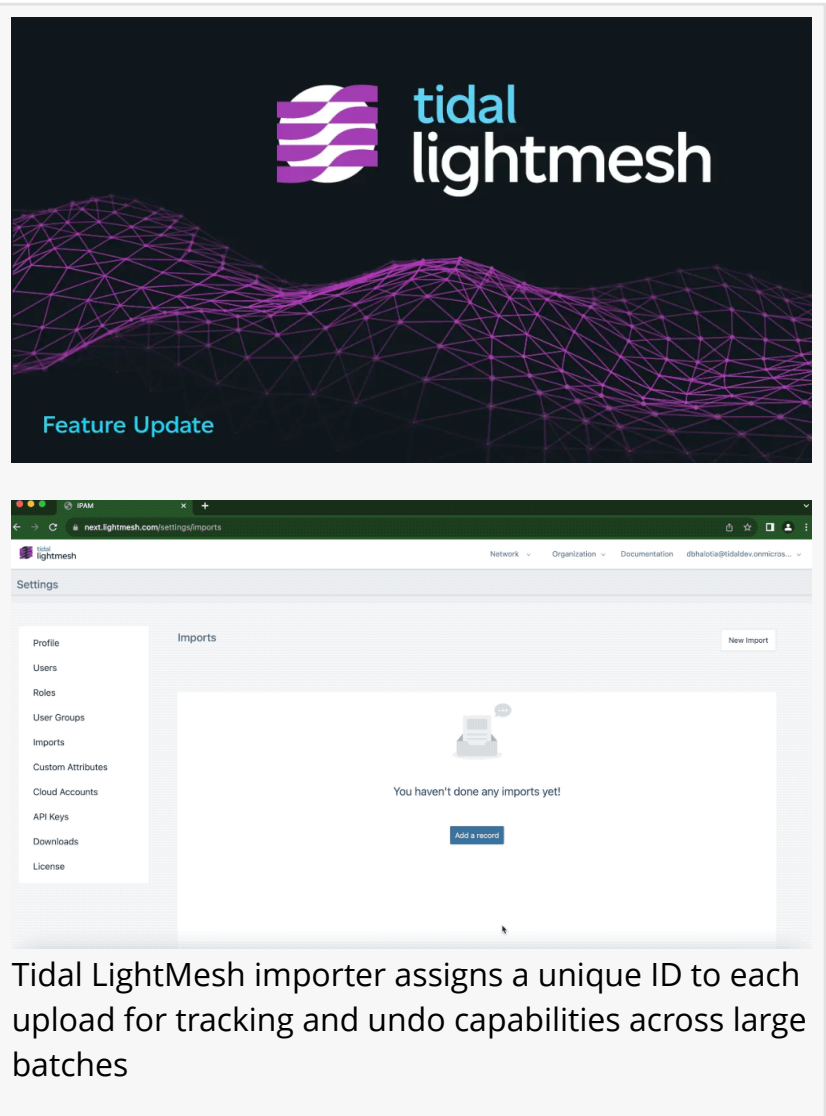

A major new feature allows [Tidal LightMesh](#) users to import IP address data via Excel and CSV spreadsheets. The importer supports zones, IP addresses, subnets, interfaces, devices, and more. Customers can download a template to easily map their data.

"We added CSV and Excel upload capabilities to simplify importing large data sets into LightMesh IPAM," said Tidal.Cloud CTO Philip Rees.

The importer assigns a unique ID to each upload for tracking and undo capabilities across large batches. Users can also re-upload to fix any issues without impacting existing data.

Enhanced Global Network Search

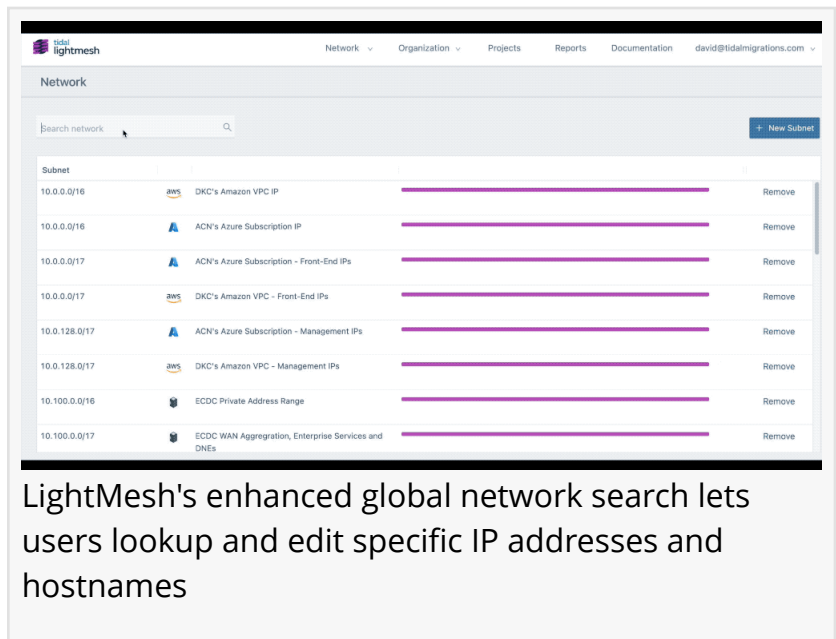

LightMesh's enhanced global network search lets users lookup and edit specific IP addresses and hostnames directly from the search interface. Additional graph capabilities connect all related

entities like locations and business units.

LightMesh Leads Enterprise IP Address Management Modernization

Meeting a strong market demand for IP address management modernization, LightMesh simplifies previously manual IP tracking tasks for enterprises. These latest product innovations demonstrate Tidal.Cloud's commitment to driving modernization for how enterprises manage critical networking resources. Network teams can expect more features and integrations that promise to further transform IP address tracking.

LightMesh's enhanced global network search lets users lookup and edit specific IP addresses and hostnames
