Open banking is a banking practice in which third-party financial service providers can use application programming interfaces (APIs) to gain access to consumer banking, transactions, and

other data from banks and NBFCs. These APIs deliver a secure way to share financial information between two parties and makes it easier for consumers to compare the details of current accounts and other banking services. The open banking unites banks, third parties, and technology providers, allowing them to exchange data easily and securely for the benefit of their consumers.
