

Introducing DateGPT: Revolutionizing Dating with Artificial Intelligence

DateGPT uses AI for a groundbreaking leap in online dating. By analyzing your dating behavior and app usage, DateGPT's AI agent learns your preferences.

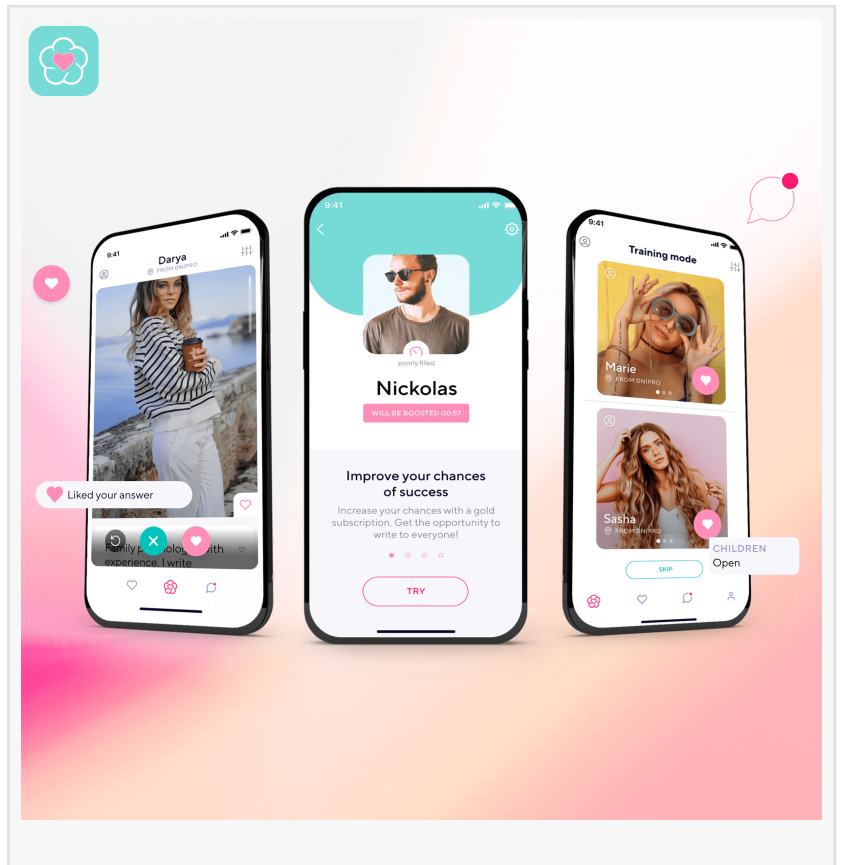

NOVATO, CALIFORNIA, UNITED STATES OF AMERICA, September 5, 2023 /EINPresswire.com/ -- DateGPT uses AI to create the greatest leap in online dating in a generation. DateGPT uses dating behavior and app usage to train an AI agent to literally learn your dating preferences. This allows a unique pairing technology where couples pair based on their likes and dislikes. "If you look at the current dating landscape, we've seen apps that flood women with lousy low-quality matches and leave most men barely even given

a chance to talk to women", says DateGPT founder Bryant Harris. "DateGPT was founded on the idea that we could learn the dating preferences of both parties and provide far superior matching technology than what your average online dater has experienced in the past."

“

Our app is designed to be a dynamic companion that learns from its users and supports them in their journey to finding meaningful connections.”

Bryant Harris, CEO of DateGPT.

At the heart of DateGPT's unique offering is its cutting-edge AI model, which you can think of as a trusted concierge who intimately knows your dating preferences. You can quickly train this concierge using training more or let it learn your preferences more slowly by just using the app. The app's AI refines its algorithms to provide increasingly accurate and compatible match suggestions. This continuous learning process empowers DateGPT to adapt and evolve with users' evolving tastes, enhancing the overall dating experience. The more you use the app, the

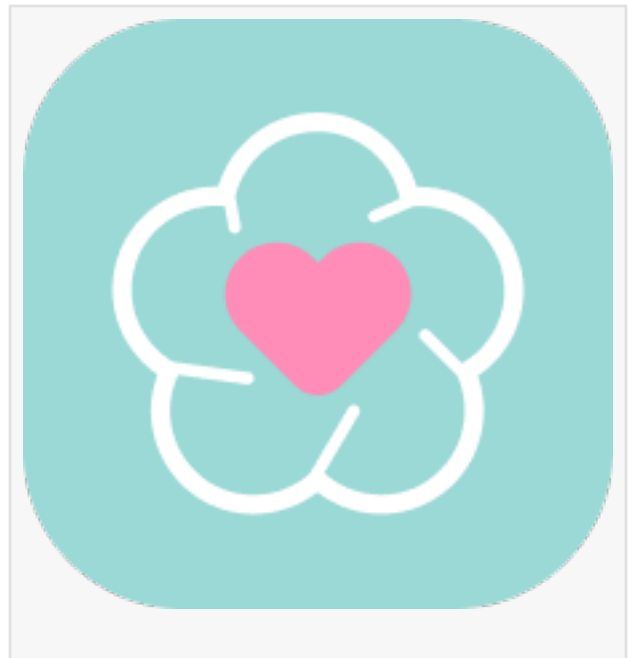

better your matches become. Women get fewer overall matches, while both men and women enjoy more higher-quality matches based on their own tastes and personality.

"We believe that dating apps should not randomly try to match their users for the sake of matching them," said Bryant Harris, CEO of DateGPT. "Our app is designed to be a dynamic companion that learns from its users and supports them in their journey to finding meaningful connections."

DateGPT leads the charge in reimagining the dating scene and is set to launch in Q4 of 2023.

Early users will receive three months of free usage to experience the power of next-generation dating.

Early [signup is free](#), and users can provide their information at <https://dategpt.app>.

About DateGPT:

DateGPT is an innovative dating app powered by advanced artificial intelligence technology. By intelligently analyzing user behavior, preferences, and even physiological cues, DateGPT revolutionizes the matchmaking experience, offering personalized and empathetic features that set it apart in the world of online dating.

DateGPT encourages respectful and ethical use of its features to enhance the dating experience for all users.
