

TeraByte Drive Image Backup and Restore Suite Has A New Version

Image for Windows Is Better Than Ever

LAS VEGAS, NV, UNITED STATES, August 30, 2023 /EINPresswire.com/ -- TeraByte Drive Image Backup and Restore Suite version 3.61a Has Launched

TeraByte Inc. is proud to announce the launch of the latest version of TeraByte Drive Image Backup and Restore Suite Version 3.61a released on July 12, 2023, which includes several important bug fixes, along with other tweaks and various enhancements that improve overall performance and reliability.

TeraByte Drive Image Backup and Restore, or Image for Windows, offers an easy and reliable way to backup your data or transfer the entire contents of your disk drive to a new computer.

Some of the notable changes include the ability to omit the usnjrnl data from being backed up thanks to the SkipUsnJrnl option. There's also a new OPW option that supports obfuscated passwords.

In addition this version was updated only to trigger the "Check for Update" notification of update.

TeraByte Drive Image Backup and Restore Suite 3.61a is released as a Unicode version, so please make sure that all binaries are updated to the latest versions.

There's no better way to ensure that every file on your drive is safely backed up than by making an accurate, byte-by-byte copy of your entire hard drive. Creating a drive image preserves everything on the drive including your files, programs, settings, as well as the operating system.

When the need arises you can simply extract the image to any other hard drive with sufficient space. A drive image is ideal for recovering your computer after a hardware failure. Using TeraByte Drive Image Backup and Restore is also the obvious choice for anyone who wants to upgrade to a new computer or simply replace the hard drive without having to reinstall the operating system and everything else from scratch.

To get started with a free 30-day trial of the backup and restore suite, visit <http://www.drive->
