

Waste to Energy Market 2020 Global Players Are Curtiss – CNIM, WHEELABRATOR TECHNOLOGIES INC, JOHN WOOD GROUP PLC

Waste to Energy Market Expected to Reach \$50.1 Billion by 2027

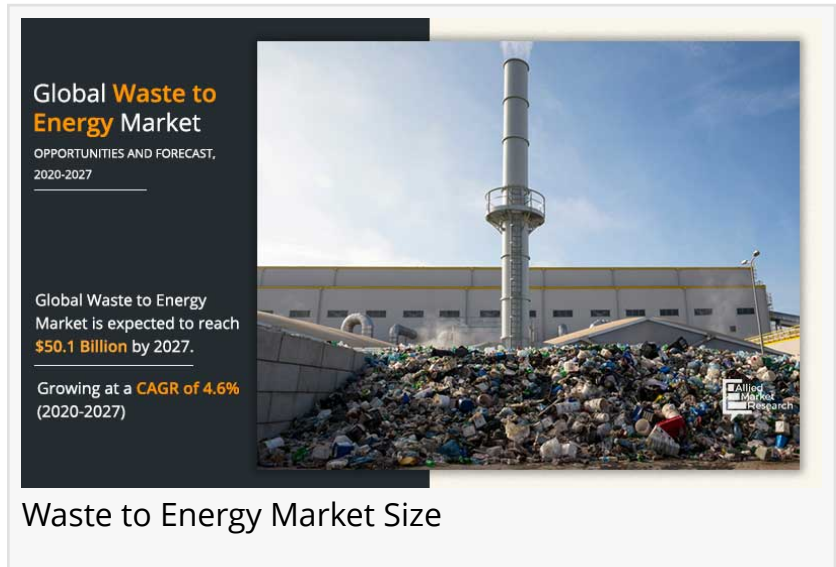

PORTLAND, OREGON, UNITED STATES, September 5, 2023 /EINPresswire.com/

-- The global [waste to energy market](#) was valued at \$35.1 billion in 2019 and is projected to reach \$50.1 billion by 2027, growing at a CAGR of 4.6% from 2020 to 2027. Waste to energy is one of the most effective and robust alternative sources of energy, which helps in the reduction of CO2 emissions and thus replaces fossil

fuels. Using waste as a combustion substance is expected to reduce landfill volumes by more than 90%. For every ton of waste burned, one ton of CO2 emission is reduced, which further helps in eliminating methane, which could be leaked with landfill disposal.

Growth in population and rise in landfill levels present numerous opportunities for market expansion. Moreover, the surge in demand for renewable sources of energy globally, an increase in investment by governments, and the usage of other renewable energy sources as substitutes to reduce carbon content are further anticipated to boost the overall growth of the market. However, high costs associated with plant installation and infrastructure of expensive components are expected to hamper the overall industry growth. Several problems are encountered during the construction and development of waste to energy generation plants; one of the major problems is cost. Installing and maintaining infrastructure to generate energy by burning waste serves as a major challenge, which restrains the growth of the marker. Although the fuel cost is low, maintenance activities represent a big part of the total cost, as it is a new technology.

The market is expected to register the highest growth in biological processes, owing to an increase in technological advancements and a rise in disposable incomes. Furthermore, rapid urbanization and an upsurge in renewable energy sources are expected to boost the market growth.

The incineration segment accounted for around half of the thermal technology segment in 2019, owing to the perennial modifications in the industry and efficient techniques & processes, which are in high demand globally. Thus, the increase in the requirement for high-tech waste to energy conversion methods fuels the market growth globally.

In 2019, Asia-Pacific and LAMEA collectively accounted for nearly two-fifths share of the global market, in terms of volume, and are expected to continue this waste to energy market trend, owing to an increase in urbanization, specifically in China, India, Brazil, and other developing countries. Moreover, the rise in urban population with increased per capita disposable income and growth in overall consumer spending drive the growth of the Asia-Pacific market.

Impact Of Covid-19 On Global Waste To Energy Market

Continuing the delivery of basic waste management services like waste collection and management has become a major challenge for cities having maximum fallout from COVID-19. Every year around 2 billion metric tons of municipal solid waste are generated. It is estimated that by 2050 annual waste generation will increase by 70-75% to reach 3.4 billion metric tons. As the world is unlocking halted operations implemented during a pandemic, it is expected the government will partner with the private sector through public-private partnerships to discover sustainable solutions.

Key Findings of the Study:

- The incineration segment is anticipated to witness the highest waste to energy market growth during the analysis period and occupy around half of the total thermal technology market in 2019.
- Asia-Pacific is projected to grow with a CAGR of 4.8% during the forecast period.
- Japan occupied around one-third waste to the energy market share of the Asia-Pacific in 2019.
- The North American thermal waste to energy market growth is projected to grow at a CAGR of 4.2%.

The key players have adopted various market penetration and growth strategies, such as mergers & acquisitions, to strengthen their foothold in the waste to energy market size. The key

players operating in waste to energy industry include Waste Management Inc., Suez Environment S.A., C&G Environmental Protection Holdings, Constructions industrielles de la Méditerranée (CNIM), China Everbright International Limited, Covanta Energy Corporation, Foster Wheeler A.G., Abu Dhabi National Energy Company PJSC, Babcock & Wilcox Enterprises, Inc., and Veolia Environment.

About Us

Allied Market Research (AMR) is a full-service market research and business-consulting wing of Allied Analytics LLP based in Portland, Oregon. Allied Market Research provides global enterprises as well as medium and small businesses with unmatched quality "[Market Research Reports](#)" and "Business Intelligence Solutions." AMR has a targeted view to provide business insights and consulting to assist its clients to make strategic business decisions and achieve sustainable growth in their respective market domains.

Pawan Kumar, the CEO of Allied Market Research, is leading the organization toward providing high-quality data and insights. We are in professional corporate relations with various companies and this helps us in digging out market data that helps us generate accurate research data tables and confirms the utmost accuracy in our market forecasting. Each and every data presented in the reports published by us is extracted through primary interviews with top officials from leading companies of the domain concerned. Our secondary data procurement methodology includes deep online and offline research and discussion with knowledgeable professionals and analysts in the industry.
