The library irBoard.NET, Reducing the cost of tablet-side development

DAISEN, AKITA, JAPAN, September 8, 2023 /EINPresswire.com/ -- ITO SOFT DESIGN Inc. has released irBoard.NET as an open-source library.

The library is designed for connecting with irBoard, an iOS app that allows an iPad to function as a touch panel device for industrial machines.

With irBoard.NET, the iPad can also be used with Windows apps, not just industrial machines.

With irBoard, changes can be made to the text, images, and layout of pages without having to know any programming. This makes it easy for anyone to make changes to pages. This is a huge time saver for businesses and organizations who need to make the system.

irBoard and irBoard.NET

For those who've wanted an app to be able to communicate with a tablet, then irBoard.NET is the ideal library. It's easy to use - just a few lines of code in the app and good to go.

irBoard.NET is open source, so it can be used for free on projects. For those who want to contribute, can do so by submitting pull requests on GitHub.
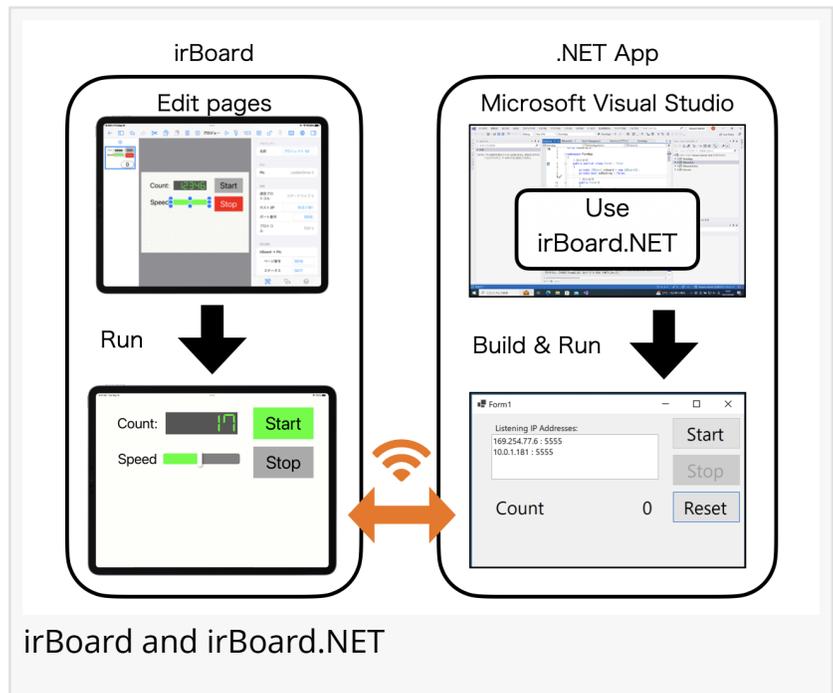

So why not give irBoard.NET a try?
