become incredibly complex and interconnected, resulting in a constant stream of alerts, the need for tedious tuning, and repetitive manual tasks. To make matters even more challenging, cybercriminals are evolving their tactics, introducing new, more complex attacks such as Ransomware-as-a-Service operations, all designed to avoid detection. As a result, businesses across various industries are feeling the impact of these challenges, with a staggering 84% of enterprises experiencing one or more breaches in the past year.

In today's digital age, cybersecurity is paramount for businesses of all sizes. With the ever-evolving landscape of cyber threats, safeguarding organizations' sensitive data and ensuring the continuous operation of online services/products is a top priority. Recognizing this need, Swasti Datamatrix has revolutionized the way organizations protect themselves from cyberattacks by offering a comprehensive Security Operations Center (SOC) as a Service.

SOCaaS provides continuous monitoring, threat detection, and incident response, backed by a team of dedicated experts and cutting-edge technologies. This proactive approach empowers businesses to stay ahead of cyber adversaries, ensuring business continuity, compliance, and

reputation preservation in an increasingly interconnected and vulnerable digital world.

After carefully examining cyberattacks that were identified and prevented over a 90-day period, the BlackBerry Threat Research and Intelligence Team has documented the following statistics in their report:
□ 1,578,733 malware attacks analyzed
□ 200,454 unique attacks with undetected malware
□ An average of 17,280 attacks per day
□ 60% targeted finance, healthcare, retail
□ Healthcare: 93,000 targeted attacks

The internet has become the most important channel for many businesses. Ten years ago, security teams had to deal with large volumes of people, assets, and locations. Today, the volume of data and traffic that businesses handle online is far greater. To protect against attacks, businesses need a reliable way to sift through all this traffic.
