Study's Key Findings

Increased Demand for Lung Exercise Machines to Manage Respiratory Disease Symptoms: The lung exercise machine market is likely to be driven by an increase in the use of lung exercise machines for pulmonary rehabilitation. These machines are mostly used to treat postoperative pulmonary problems. These gadgets are widely used in hospitals and clinics. Furthermore, the

use of these devices to treat symptoms of respiratory disorders such as COPD has offered profitable commercial prospects for industry participants. Lung workout gadgets are also becoming more popular among athletes looking to improve their performance in endurance sports.

The surge in demand for three-chamber lung exercise machines is likely to provide significant growth prospects for lung exercise machine companies. In 2021, the three-chamber lung exercise machine sector retained a significant market share. These gadgets are efficient and convenient for supporting respiratory muscle endurance training in healthy people. These are also commonly used in lung exercise for patients suffering from asthma and other chronic respiratory illnesses.

## Type

- Three-chamber Lung Exercise Machine
- Two-chamber Lung Exercise Machine
- One-chamber Lung Exercise Machine

## Application

- Asthma
- Chronic Obstructive Pulmonary Disease (COPD)
- Cystic Fibrosis
- Pneumonia
- Others

## End user

- Hospitals & Clinics
- Homecare
