As the film shows, in many ways, the scientists behind the atomic bomb didn't fully comprehend the impact of its world-changing power until its first and only use in a real war. It was an eye-opening moment for physicists around the world, realizing how the pursuit of scientific breakthroughs could be the cause of mass devastation. This sparked the first Shelter Island Conference, which focused on promoting the free scientific collaboration that had been impossible during the war.

They chose The Rams Head Inn as the venue. Set in the beauty of the Hamptons, it's secluded and peaceful. The scientists could get to know each other over the course of a few days, sharing meals and spending time together outside of the conference's formal presentations. There were no government men or army brass looking over anyone's shoulders; they could finally take a break from the mundane world and focus on their shared passions for knowledge and understanding the universe.
