Sports trainers can assess and monitor performance in real time using sensors that are attached to the body or woven into "smart clothing," which is active wear with

sensing fibres. Nearly every aspect of the athlete can be measured, including temperature, hydration, and even respiration and heart rate. In addition, the trainer can use these real-time metrics to assess which areas each athlete needs to pay closer attention to. Real-time individual performance measures help establish a more exact and accurate baseline because every athlete is different. Trainers can use live metrics during practise to determine whether it's appropriate to

rest, stretch, or train harder.

Rise in penetration of internet, smartphones, computers, and other electronic media & entertainment devices has significantly increased involvement of children and youth towards indoor activities. This has resulted in diminished health and deterioration of skills & abilities of this population, which in turn has declined the interest and rate of participation in sports and sports activities. Thus, decline in Sports Training Market Trends among children and young population in sports, owing to mounting interest in media & entertainment devices restrains the SSports Training Industry growth.

The word “sports training” is used in the sporting context to refer to the process of getting athletes ready for their best possible performance. Sports education is the physical, technical, intellectual, psychological, moral, and ethical preparation of an athlete or player. Sports training is a comprehensive, scientific, and organised method of preparing athletes for elite levels of athletic performance.
