leading innovator in education technology, is thrilled to announce that it has been honored with the prestigious [2023 Tech & Learning Awards of Excellence](#) in its “Back to School” edition. This award recognizes Branching Minds’ outstanding contributions to the education sector, and its deep commitment to empowering educators and improving student outcomes.

Branching Minds is an online K-12 education platform that brings together all quantitative and qualitative data needed for teachers, specialists, and administrators to

build a comprehensive multi-tiered system of support (MTSS).

For 42 years, Tech & Learning has recognized the most impressive products and services that offer schools versatility, value, and solutions to specific problems to support innovative, effective teaching and learning. Awardees are selected by a tech-savvy panel of educators. In selecting Branching Minds as a winner in the Primary Education category, the judges wrote “Data tracking is not easy. The platform brings together all quantitative and qualitative data needed for teachers, specialists, and administrators to identify which students need support.”

Branching Minds’ comprehensive platform equips educators with evidence-based tools and resources to identify and address students’ individual learning needs. By bringing together actionable data, collaboration tools, and a library of research-based interventions, the platform empowers educators to create inclusive and effective learning environments, promoting the academic success of every student.

“We are immensely honored to receive the 2023 Tech & Learning “Back to School” Award of Excellence” stated Maya Gat, CEO and Co-Founder of Branching Minds. “This recognition underscores our unwavering commitment to supporting educators and enhancing student

outcomes. In these rapidly changing times, it is crucial to empower educators with the tools they need to help all students succeed.”

“With ESSER funding coming to an end, and emerging tech like AI exploding into the market with little guidance as to how best to integrate this new technology into the classroom, it’s more important than ever to curate the many education products on the market to ensure your investments support innovative teaching and learning,” says Tech & Learning Content Director Christine Weiser. “Our judges chose the following nominated products based on their versatility, compatibility, value, and ability to help schools solve challenges and support continuous instruction. Congratulations to all of our winners.”
