The Steinberg Law Group has decades of experience in handling mesothelioma and other asbestos-related cases. With offices in New York, California and Texas, the Steinberg Law Group has a national footprint that helps win the best possible financial compensation for clients. www.mesotheliomaoptions.com

Typically, asbestos exposure will have occurred sometime between the 1950s and the 1980s. Some of the most prevalent professions that encountered large quantities of asbestos include power plant workers, maritime workers, industrial workers, plumbers, pipefitters, electricians, mechanics, machinists, miners, railroad workers and construction

Our Mesothelioma Options Help Centers have a network of top doctors and surgeons from coast to coast to ensure that our clients and their families receive the best possible medical care and information.

workers, to name a few. Since the latency period for mesothelioma patients is approximately 40 years, most people diagnosed with mesothelioma or asbestos-related lung cancer in 2023 were exposed decades ago. www.mesotheliomaoptions.com

Although there are no naturally-occurring asbestos deposits in Florida, many industries in the state used commercial asbestos that was shipped in from around the country to one of five asbestos processing plants (Boca Raton, Jacksonville, Pompano Beach, St. Petersburg and Tampa). Floridians who worked in locations such as the shipyards, chemical/power plants and auto repair shops are at an elevated risk of developing asbestos-related diseases. In addition, many public buildings in Florida contain asbestos, which can have serious implications for businesses and property owners who wish to make changes to their properties and buildings. As a result, professional asbestos abatement specialists should always be present when doing any demolition or construction any properties where asbestos may be present.
