

Live Webinar on How to Address DevOps Challenges Through a Centralized GitOps-Centric Approach

Nethopper's CEO to speak at the HPE Developer Community Meetup: "DevOps Alert: Tool Sprawl. Complexity. Burnout. Help!" on September 27, at 11 am ET.

BOSTON, MA, USA, September 21, 2023 /EINPresswire.com/ -- [Nethopper](#), the pioneer of Kubernetes Application Operations Platform as a Service (KAOPS), today announced that Chris Munford, its founder and CEO, is the guest speaker at a live webinar hosted by the [HPE Developer Community](#), entitled "DevOps Alert: Tool Sprawl. Complexity. Burnout. Help!"

Live Webinar:

- DevOps Alert: Tool Sprawl. Complexity. Burnout. Help!

Date/Time:

- Sep 27, 2023 at 11 AM ET (05:00 PM CET, 8 AM PT)

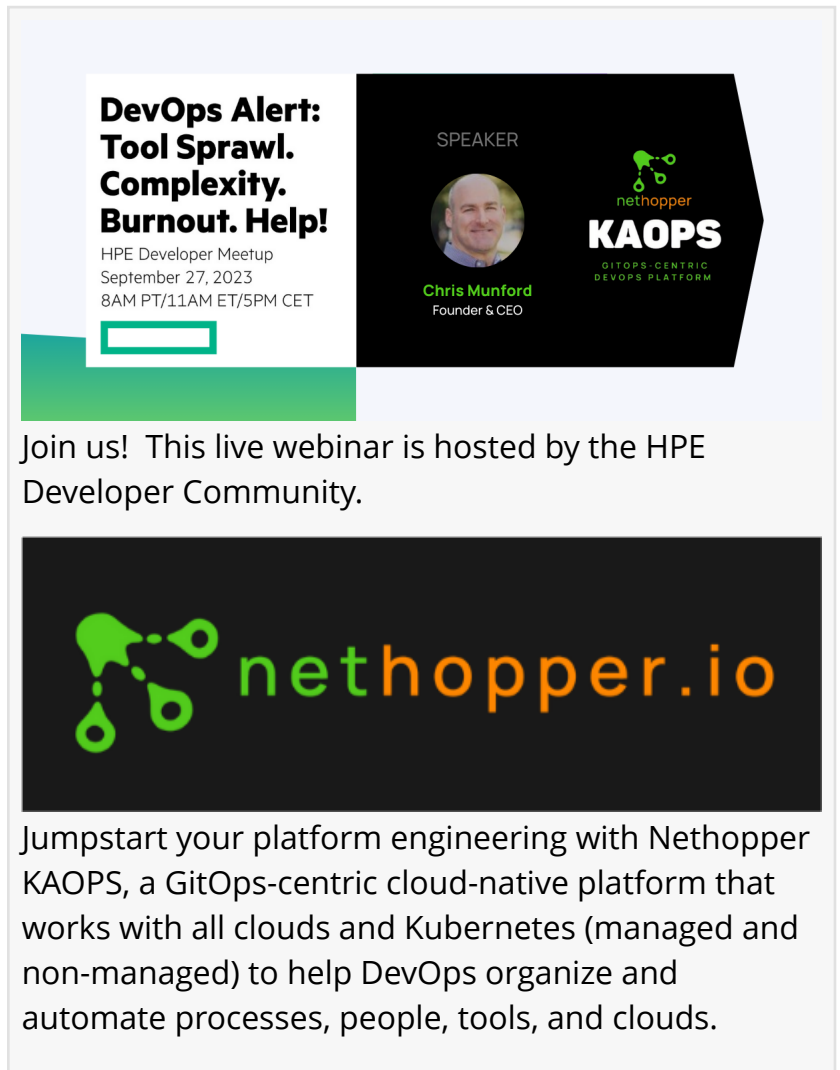

Speaker:

- Chris Munford, CEO of Nethopper

Why Attend:

- Even as the adoption of cloud-native tools has grown, enterprises have actually lost their ability to be agile. DevOps teams find it even more difficult now to develop and deploy features to meet customers' expectations.

- Ironically, having more cloud-native development tools does not equate to having more agility.

DevOps Alert: Tool Sprawl. Complexity. Burnout. Help!
HPE Developer Meetup
September 27, 2023
8AM PT/11AM ET/5PM CET

SPEAKER

Chris Munford
Founder & CEO

KAOPS
GITOPS-CENTRIC
DEVOPS PLATFORM

Join us! This live webinar is hosted by the HPE Developer Community.

 **nethopper.io**

Jumpstart your platform engineering with Nethopper KAOPS, a GitOps-centric cloud-native platform that works with all clouds and Kubernetes (managed and non-managed) to help DevOps organize and automate processes, people, tools, and clouds.

In fact, too many free and “easy-to-implement” tools have led to tool sprawl – a burden requiring DevOps teams to continuously integrate and upgrade their tools. Added to that, teams are challenged with managing their Kubernetes application operations across hybrid and multi-cloud landscapes, knowing who did what and when for both applications and infrastructure.

- In this session, you will learn how to address DevOps challenges like these while increasing developer productivity and collaboration through a centralized GitOps-centric approach for automating software development and deployment, infrastructure provisioning, workflows, pipelines and more.
