

Ukrainian Company Brokee Introduces DevOps Hiring Platform with AI Features and Expansive Testing Library

Innovative DevOps Evaluation Platform, Brokee, launches AI-powered assessments and expands its testing library.

RENO, NEVADA, UNITED STATES, October 24, 2023 /EINPresswire.com/ -- [Brokee](#), the Ukrainian-based startup, is gaining attention in the field of HR and hiring with its recently introduced updates, setting it apart from other technical skill assessment platforms, such as Codility and DevSkiller.

Just a few months after its launch, Brokee is excited to introduce new features and tests aimed at improving the [hiring process](#) for both hiring teams and candidates.

In July, Brokee introduced its [DevOps Evaluation Platform](#), designed to assist HR and technical

“

At Brokee, we're dedicated to advancing the hiring process, and the features we've introduced underscore our mission to make hiring more efficient and effective for organizations worldwide.”

hiring teams in assessing new engineers efficiently, ultimately saving time and resources. Now, Brokee is assisting clients in streamlining their hiring processes and enhancing their ability to secure quality talent with new AI capabilities.

For example, the platform provides AI-generated summaries of candidate activities during tests. These summaries offer a human-friendly overview of candidate performance, ensuring that all stakeholders, including non-technical HR professionals, can easily interpret results and make informed decisions. The educational aspect of AI

summaries also allows users to discover new tools and approaches employed by candidates, fostering continuous learning.

Besides new AI features, Brokee has implemented other innovative tools to improve the workflow during the hiring process. One such tool is a recording feature that enables users to replay candidate activities, providing a detailed visual of the testing environment.

Additionally, Brokee now allows hiring teams to send multiple tests to a single candidate, enhancing evaluation flexibility, especially for assessing candidates on diverse technologies. Candidates can select their test order, and the reset option offers second chances for those eager to learn and improve.

Brokee is also expanding its testing library by introducing Linux Apache and Google GCP tests, ideal for evaluating the hands-on skills of System Administrators, IT Support Engineers, and Customer Support Engineers. This addition enhances the versatility of Brokee's testing library, ensuring that hiring teams have access to a wide range of assessments tailored to their unique requirements. Other available DevOps evaluations include Linux (Nginx), AWS Networking, and Kubernetes (Nginx Ingress).

Maksym Lushpenko, CEO of Brokee, expressed his enthusiasm for these exciting updates, stating, "At Brokee, we're dedicated to advancing the hiring process, and the powerful AI capabilities and enhanced workflows we've introduced underscore our mission to make hiring more efficient, effective, and insightful for organizations worldwide."

Brokee continues to release updates, expand its test library, and introduce new functionalities to assist its customers. These enhancements underscore Brokee's commitment to simplifying the hiring process, improving efficiency, and helping organizations acquire high-quality talent.

About Brokee:

Brokee is a Ukrainian-based startup dedicated to revolutionizing the hiring process by providing innovative and efficient technical evaluation for HR and hiring teams. With a focus on IT and DevOps assessments, Brokee's platform enables companies to identify top-performing candidates quickly and accurately, saving both time and resources in the hiring process. Founded on a commitment to excellence, Brokee aims to bridge the gap between talent and

opportunity in the tech industry.
