The thermoforming plastics are used to produce packaging materials, and consumer products that are durable, resilient, and tamper-resistant. Thermoforming is a plastic manufacturing process that uses heat to shape plastic into a variety of products. It protects the products while in transit and offers several seal options that will either extend the product's shelf life or allow easy access, depending on the packaging needs. These are extremely versatile and can be utilized to manufacture parts to meet an end user's requirements and for a very wide range of applications.
