Typically, asbestos exposure will have occurred sometime between the 1950s and the 1980s. Some of the most prevalent trades that encountered large quantities of asbestos include: power plant workers, maritime workers, industrial workers, plumbers, pipefitters, electricians, mechanics, machinists, miners, railroad workers and construction workers, to name a few. Since the latency period for mesothelioma patients is from 10 to 50 years, most people diagnosed with mesothelioma or asbestos-related lung cancer in 2023 were exposed decades ago.

The Steinberg Law Group has decades of proven experience and the resources to help victims of asbestos exposure and their families obtain the financial compensation they deserve. All of it.

mesothelioma death rates in the top 50 counties in the nation. Minnesota also has two known naturally-occurring asbestos deposits located in Aurora and Eastern Mesabi. Minnesotans who worked in flour mills, oil refineries and power plants are at an increased risk of developing mesothelioma or asbestos-related lung cancer. www.mesotheliomaoptions.com
