Register now for World Cord Blood Day 2023 - Free online medical conference November 15th

Cord blood is the blood left in the umbilical cord and placenta following the birth of a child. It is rich in life-saving stem cells and easier to match than bone marrow. Since 1988, more than 60,000 cord blood transplants have been performed worldwide in the treatment of leukemia, lymphoma, thalassemia, sickle cell disease and more. In addition, researchers are now seeing that cord blood and placental tissue cells hold tremendous potential in innovative clinical trials focused on regenerative medicine and novel cellular therapies to potentially treat cerebral palsy, autism, spina bifida and more.

Cord blood is at the forefront of medicine. Yet, cord blood is still thrown away as medical waste in the majority of births. Education is key to changing this practice and stopping the waste. Advancing cord blood education and awareness is the purpose of World Cord Blood Day.

World Cord Blood Day 2023 will provide the perfect opportunity for healthcare professionals, parents, students and government authorities to learn about this vital medical resource. In addition to the many live events being held globally by World Cord Blood Day Community Champions, a livestream will launch the official WCBD 2023 conference at 10am ET on November

Cord blood is nature's medicine, rich in life-saving stem cells. We need to preserve this valuable medical resource. Let's stop the waste through education and action on World Cord Blood Day 2023!"
