- Majority of the point of care lipid test centers experienced a broad spectrum of difficulties, and most were affected more in the second wave of the pandemic This factor impacted the market negatively.
- However, the global market for point of care lipid test has recovered slowly and steadily.

The test involves collecting a small blood sample from a person's fingertip or vein and analyzing it using a handheld device or a small analyzer machine, which provides results within minutes. This allows healthcare professionals to make timely treatment decisions and advise patients on lifestyle changes or medication therapy to manage their lipid levels and reduce their risk of heart

disease.

In addition, market leaders are focusing on developing strategies to increase the availability and use of lipid testing products in eye care and developing economies. Additionally, increasing appetite for technological advancements that increase speed, accuracy, and user-friendliness, as well as increasing rates of technology adoption such as self-testing wearable devices are driving market growth.
