

Deimos-One Establishes Research Subsidiary to Support Rapidly Growing Data Intelligence Sector

Deimos-One Labs will serve the U.S. government and commercial customers with data analysis, warfighting intelligence, and space systems support.

LAS VEGAS, NEVADA, UNITED STATES, October 12, 2023 /EINPresswire.com/ -- Deimos-One, a leading aerospace and defense technology company, has today announced it has established a new wholly-owned subsidiary, [Deimos-One Labs](#) (D1L), to support the expansion of Deimos-One's stratospheric space capabilities and serve commercial customers. D1L will support launch services and space systems capabilities to the U.S. government and its allies.

“

Within seconds, Animus can evaluate millions of variables against multiple goals, options, and outcomes, identifying the optimal path to success.”

Jamin Thompson

The company plans to offer a comprehensive suite of domains — including but not limited to remote sensing analysis, artificial intelligence, predictive analytics, business and warfighting intelligence, and economics — to serve commercial customers and research institutions.

Central to Deimos-One's vision is The Animus, a proprietary, AI-driven Intelligent Decisioning System that promises to reshape the landscape of strategic planning and problem-solving. Built on the principles of

evolutionary computation, Animus is designed to rapidly analyze difficult problems, create complex models, and recommend the optimal pathways to resolve them, solving hundreds of thousands of computations in nanoseconds.

"Data science has fallen short in recent times when it comes to providing executives with something of value to reduce costs, grow revenue, improve efficiency, and scale," said Jamin

Thompson, Deimos-One's Co-Founder and Chief Executive Officer. "So, Deimos-One isn't just building data models; we're not just analyzing data; we're modeling a new paradigm for decision-making itself. Animus leverages the most state-of-the-art technologies of our time — it can make calculations at warp speed — showing us paths that were previously unthinkable; it represents a real evolutionary leap in decision making. This allows us to make decisions faster, even in times of great uncertainty. Now, your most complex decisions are not just data-driven, they're destiny-driven."

Since the Company's first launch of the HALO space vehicle in 2020, Deimos-One has conducted multiple successful launches, including research missions for national security customers and private companies. Under the new D1L subsidiary, Deimos-One will build on this proven track record to deliver new space and data science capabilities for national security and commercial applications. The diversification into the data intelligence sector marks a strategic expansion for Deimos-One, broadening its scope and impact across industries.

About Deimos-One

Deimos-One is a leading aerospace and defense technology company, pioneering human and robotic spaceflight and space exploration for individuals and researchers, as well as a designer and developer of the world's most advanced autonomous space vehicles. The company is developing a stratospheric observation platform designed to support complex missions in near-space environments. To learn more, visit www.deimosone.com.
