Amino acids and proteins for animal nutrition are molecules that consist of an acidic carboxyl

group (-COOH), a basic amino group (-NH₂), and an organic R group or side chain and these are the building blocks for proteins that are essential for the growth, repair, and maintenance of tissues in the body. Proteins are large, complex molecules that are essential for life and contain amino acids that are linked together by peptide bonds. Proteins are involved in every biological process, from muscle contraction to immune response to cell signaling.
