

Nanodems releases Latest Update that offers Enhanced Efficiency and Response Capabilities to SOCs

Nanodems releases Latest Update that offers Enhanced Efficiency and Response Capabilities to Security Operations Centers

BURLINGTON, MASSACHUSETTS, UNITED STATES, October 24, 2023 /EINPresswire.com/ -- Security Operations Centers (SOCs) form the cornerstone of physical security strategies for many organizations yet often have a hard time managing efficiency, data management, incident response, and system integration simultaneously.

Recognizing these challenges, [Nanodems](#) is thrilled to announce the latest update to NDIS, the next-gen PSIM software, which provides multiple improvements and new features that help ensure SOCs deal with issues fastest and most efficiently.

“

We understand the complexities SOCs deal with daily. We're furthering our commitment to support them in their vital roles, ensuring organizations' security postures remain resilient and proactive.”

Asli Citak

Without a consolidated view, operators working in SOCs might lack a complete understanding of incidents unfolding across facilities. This can lead to delayed responses and even the risk of overlooking crucial details that can escalate into critical breaches. NDIS directly addresses this concern, ensuring that SOCs have an all-in-one view of their security ecosystem with its enhanced map feature that visualizes all security assets on GIS maps, controlling them and managing their alarms right on the spot.

With the ever-evolving criminal incidents, Nanodems recognizes that to remain completely

secure, the security ecosystems of organizations need to update and evolve continually. The new Robotic Process Automation feature addresses precisely this. SOCs can now create their own scenarios based on the procedures that need to be followed or alarms they want to receive and let NDIS do the rest.

"We understand the complexities SOCs deal with daily," said Asli Citak, Marketing Specialist, "with these features, we're furthering our commitment to support them in their vital roles, ensuring organizations' security postures remain resilient and proactive."

Furthermore, with the latest implementation of AI into their platform, such responses can be automated easily without requiring manual intervention from operators. Alarm procedures can be set step by step beforehand, and in the case of emergencies, the best course of action will be followed by NDIS itself.
