## THE STEINBERG LAW GROUP

The Steinberg Law Group has decades of proven experience and the resources to help victims of asbestos exposure and their families obtain the financial compensation they deserve. All of it.

Typically, asbestos exposure will have occurred sometime between the 1950s and the 1980s.

Some of the most prevalent professions that encountered large quantities of asbestos include power plant workers, maritime workers, industrial workers, plumbers, pipefitters, electricians, mechanics, machinists, miners, railroad workers and construction workers, to name a few. Since the latency period for mesothelioma patients is approximately 40 years, most people diagnosed with mesothelioma or asbestos-related lung cancer in 2023 were exposed decades ago.

Although Arkansas has no naturally-occurring asbestos deposits, residents of the state can and have been exposed to asbestos at home and in the workplace. Citizens of Arkansas who worked in the mines, power plants and oil refineries are at an elevated risk of developing an asbestos-related illness. In addition, the University of Arkansas, Arkansas State College and the State Teachers College have all had issues with asbestos in their buildings.
