Immunoglobulin is a blood/plasma product, which is prepared from the serum of multiple of donors, used to treat patients with antibody deficiency. The isolated plasma product is clinically treated and purified to Ig, which further facilitates the treatment. Immunoglobulin is applicable in various fields such as hematology, immunology, neurology, dermatology, nephrology, ophthalmology, and rheumatology. Prevalence of various antibody deficiency disorders such as common variable immune deficiency (CVID), specific antibody deficiency, and hypogammaglobulinemia, increase in immunoglobulin indications, improved production & purification processes, growth in awareness towards antibody deficiency, and rare immune disorders among patient population drive the growth of the Immunoglobulin market.
