

Mundimex Offers Patented, Environmentally Friendly Magnetizer® Water Softener Systems to Improve Water Quality

Magnetizer® provides a modern & environmentally responsible approach to the challenges of hard water, including permanent active carbon- & salt-free treatment.

HATFIELD, PA, UNITED STATES,
November 9, 2023 /EINPresswire.com/
-- Home and enterprise water softener systems have become vital to households and companies worldwide, combating many challenges associated with hard water. Magnetizer®, an

established name in environmentally friendly water treatment technology since 1987, offers an innovative monopolar solution that stands out in the market, providing numerous benefits for homeowners and businesses.

“

What looks like a rather inconspicuous metallic shape is a sophisticated, high-performance tool. Magnetizer is a powerful device full of innovative technology. With a fast ROI, it's a no-brainer.”

Grant Falante

Traditional water softener systems typically rely on ion-exchange resins, salt, active carbon, or chemicals to remove hardness minerals like Calcium and Magnesium from water. While effective, these systems can be costly to install and maintain, and they require continual renewable while generating wastewater that contains high levels of chemical compounds like, e.g., salt or activated carbon, which is harmful to the environment. This is where Magnetizer® comes offering a sustainable and ecological alternative.

It employs advanced magnetic water treatment technology, placing the latest-generation NASA-deployed permanent ceramic alloy magnets encased in high-grade plastisol coating. It contains a patented Flux Driver Plate™, easily attached with plastic ties around any pipe without any infrastructure modification. The unique magnet configuration treating any passing fluid in the

most efficient patented monopolar method creates a solid, unipolar, and focused magnetic field that uniquely affects water's properties. Here's how it works:

How it works: the magnetic field changes the bond structure of minerals in the water. They stay suspended in water instead of forming hard scale deposits, preventing scale buildup in pipes, faucets, and appliances. They evacuate through open faucet flow, enriching water in those recovered minerals.

How it works: The altered water behavior makes it easier to dissolve (cure) existing scale deposits, gradually cleaning your plumbing system over time and preventing them from forming limescale.

How it works: Softened water enhances soap and detergent efficiency, allowing you to use less while enjoying a richer lather. This results in savings on cleaning and personal care products.

How it works: By preventing scale buildup in water heaters, boilers, heat exchangers, cooling towers, and other appliances and water-carrying equipment, Magnetizer® improves energy efficiency, reducing energy bills. According to a report by the US government, consumers can save up to 48% of energy bills by eliminating 3/8th of an inch (9.5 mm) of scale deposits.

How it works: Unlike traditional water softener systems that require salt regeneration, Magnetizer® does not consume chemicals, use activated carbon, or produce wastewater, making it highly eco-friendly.

How it works: These systems require no maintenance once installed, saving end-users time and money over the long term.

How it works: Users report improved skin and hair health using magnetically treated water. While these effects may vary, it's an added potential benefit.

Mundi offers various models and sizes to suit home and enterprise [water softener system](#) requirements and needs. They are effortless to install and can be placed on the main water line,

Welcome To The World of **MAGNETIZER®**

The Best-In-Class Water Softener System & Fuel-Saver Technology

The ecologically perfect and economically correct world of the world-leading magnetic water softener system & fuel-saver for sustainable living.

Join Us To Save Money, While Protecting The Planet.

RESIDENTIAL INDUSTRIAL

ensuring that all the water entering your home or plant is treated. This ensures that you enjoy the benefits of soft water throughout your household or production process. Also, since they are permanent in action, they can be transferred from old homes buildings to new ones. It is a one-time investment for a lifetime of benefits.

Magnetizer® provides a modern and environmentally responsible solution to the challenges of hard water. By harnessing the monopolar power of state-of-the-art magnets, this innovative water treatment system prevents scale buildup, enhances cleaning efficiency, lowers energy costs, and more. As an eco-friendly and low-maintenance option, it is an excellent choice for home and building/plant owners looking to improve their water quality and environmental footprint.

The foundation of Magnetizer® is the Nobel Prize-winning science of magneto-hydro-dynamics.

Consider a more efficient and sustainable approach to water softening in your home or enterprise. To know more, contact us:
