# TCG World Metaverse and Procedural Worlds Craft Vast and Vivid Landscapes with Groundbreaking Technology

TCG World Metaverse has joined forces with Procedural Worlds to forge a sprawling and immersive environment within the burgeoning metaverse sector.

NASSAU, DE, BAHAMAS, November 12, 2023 /EINPresswire.com/ -- In a landmark year of collaboration, TCG World Metaverse has joined forces with the talented team at Procedural Worlds to forge a sprawling and immersive environment within the burgeoning metaverse sector. Covering an impressive 900 square kilometers, TCG World has been meticulously sculpted into four distinct regions: North, East, Forest, and Asia. Each quadrant boasts its own unique biome and atmosphere, thanks to the innovative suite of tools provided by Procedural Worlds — Gaia, GeNa, and the revolutionary new software, Storm.

Procedural Worlds' artisans have outdone themselves, creating a natural tapestry that encompasses hand-crafted lakes, rivers, oceans, and beaches. The terrain undulates between serene valleys and imposing mountain ranges, punctuated by breathtaking waterfalls that beckon explorers and virtual adventurers alike.

The TCG World Metaverse is not just a feast for the eyes but also an odyssey of discovery. Procedural Worlds has sprinkled the landscape with enthralling points of interest that are set to become iconic landmarks within the virtual space. Among these are the mysterious Glacial Ruins, the secretive Dragon Cave club hidden within a cavern's depths, and the adventurous Pirate Cove. Additional constructs such as marinas, ports, and other key areas serve both aesthetic and functional roles, inviting interaction and exploration.

Introducing Storm: A Revolution in World Creation
Storm is not just a tool; it's a leap forward in open-world creation and acceleration for Unity. This new software facilitates the construction of natural environments replete with realistic terrain, texturing, and lush vegetation, alongside man-made structures featuring roads, buildings with

usable interiors, cities, subterranean layers, and even dungeons.

One of the most groundbreaking features of Storm is its ability to dramatically improve frame rates — enhancements up to 100x for large open worlds. This massive performance optimization is coupled with a complete replacement for Unity terrain, accommodating massive worlds without compromising on detail or scale.

Workflow Integration and Support
Recognizing the importance of flexibility in design, Storm respects existing workflows, allowing for direct imports from Unity scenes and providing integration and engineering support. Procedural Worlds has even offered to embed its team into projects to maximize the utility of Storm.

A New Era for Metaverse and User-Generated Content: Storm is tailored to revolutionize not only Metaverse projects like TCG World but also user-generated content (UGC) and runtime-generated worlds. With design time and runtime support, as well as API-based generation and control, the possibilities for creators are virtually limitless.

Realism in Unity HDRP: Leveraging Unity's High Definition Render Pipeline (HDRP), TCG World and Procedural Worlds have infused the virtual environment with a level of realism and beauty that stands to set a new benchmark for virtual worlds. Users of TCG World Metaverse can look forward to an experience that is not only visually stunning but also richly detailed and engaging.

The Future of Virtual Experience: The question that looms on the horizon is how developers and users alike will harness the power of Storm. With its ability to transform gaming, simulation, or any application from low-poly to high-resolution, the implications for the future of immersive virtual experiences are profound. TCG World Metaverse's collaboration with Procedural Worlds is not just a testament to the achievements of the past year but a promise of the incredible potential that lies ahead.

Get an Exclusive Look into TCG World and join us in Melbourne:
Unlock two exclusive opportunities to delve into the dynamic universe of TCG World. Join us at the Australian Crypto Convention in Melbourne on November 11th and 12th!

Come and visit Procedural Worlds at Unity Unite on November 14th - 15th, or book a demo on our website (https://www.procedural-worlds.com/products/enterprise/storm/

About TCG World
TCG World Metaverse is a leading Metaverse platform that offers immersive experiences in various domains, including gaming, education, and entertainment. With a focus on innovation and technological advancement, TCG World Metaverse seeks to redefine the way we interact with digital content.
