The cloud security posture management refers to IT security technologies made to find cloud misconfiguration problems and compliance threats as well as used to continuously check the cloud infrastructure for a lack of compliance with security policy. It is used by businesses who wish to extend their security best practices to hybrid and multi-cloud systems and have embraced a cloud-first strategy. Although CSPM is frequently linked to infrastructure as a service (IaaS) cloud services, the technology can also be utilized in software as a service (SaaS) and platform as a service (PaaS) cloud settings to decrease configuration errors and lower compliance risks.
