Leukemia Therapeutics Global Market
Report 2023 – Market Size, Trends, And
Global Forecast 2023-2032*

LONDON, GREATER LONDON, UK,
November 17, 2023 /

EINPresswire.com/ -- The global
leukemia therapeutics market, valued
at \$15.16 billion in 2022, is projected to
reach \$16.25 billion in 2023, exhibiting

a compound annual growth rate (CAGR) of 7.2%. Despite the disruptive impacts of the Russia-Ukraine conflict and the lingering repercussions of the COVID-19 pandemic, the market is anticipated to expand further, achieving a projected valuation of \$21.57 billion by 2027. The market growth is primarily driven by the escalating prevalence of leukemia worldwide,

necessitating increased access to advanced medical treatments and therapeutics.

“

The market size of the
leukemia therapeutics is
expected to grow to \$21.57
billion in 2027 at a CAGR of
7.3%.”

Growing Prevalence of Leukemia Stimulates Market Demand

The global increase in the occurrence of leukemia, a form of blood cancer originating in the bone marrow, has significantly contributed to the expansion of the leukemia therapeutics market. Improved availability and accessibility

of treatment options for leukemia patients globally have amplified the demand for advanced leukemia therapeutics. Notably, the National Cancer Institute reported a rise in the number of new leukemia cases in the United States, with the count increasing from 60,530 cases in 2020 to 61,090 cases in 2021.

Key Players and Combination Therapies

Prominent industry players such as Novartis International AG and Bristol Myers Squibb are actively engaged in the development and introduction of combination therapies to enhance leukemia treatment outcomes. By combining multiple therapeutic modalities, such as immunotherapies and targeted therapies, these companies aim to provide more effective and comprehensive treatment options, promising long-term survival benefits not achievable with conventional approaches. Notably, in September 2021, the clinical research team at the US-based Dana-Farber Cancer Institute reported the efficacy of a combination therapy involving three molecularly targeted drugs. This combination, featuring an inhibitor of BCL-2 (venetoclax), a second-generation inhibitor of BTK (acalabrutinib), and a CD20 inhibitor (obinutuzumab), has demonstrated effectiveness against chronic lymphocytic leukemia (CLL).

Segments:

- Treatment Type: Chemotherapy, Immunotherapy, Targeted Therapy, Other Treatments
- Type of Leukemia: Acute Lymphocytic Leukemia, Acute Myeloid Leukemia, Chronic Lymphocytic Leukemia, Chronic Myeloid Leukemia, Other Types of Leukemia
- Molecule Type: Small Molecules, Biologics
- End-Users: Hospitals, Homecare, Specialty Clinics, Other End-Users

Geographical Insights: North America Leads Market, Asia-Pacific Witnesses Rapid Growth

North America emerged as the largest region in the leukemia therapeutics market in 2022, with Asia-Pacific expected to showcase the fastest growth in the forecast period. To gain comprehensive insights into regional dynamics, market trends, and growth opportunities, access the complete report.
