Data fabric refers to a set of data services that handle data using a network-based architecture

instead of point-to-point connections. It is a powerful architecture, which monitors and manages the data and applications, regardless of location. Data fabric is used for data management, which helps to integrate data from various sources and analyse it seamlessly in one place. It is widely used by organizations to provide a comprehensive view of business and customers across an organization through disparate data sets in real-time and historical, and finally processes automatically in an efficient way.
