Typically, asbestos exposure will have occurred sometime between the 1950s and the 1980s. Some of the most prevalent professions that encountered large quantities of asbestos include power plant workers, maritime workers, industrial workers, plumbers, pipefitters, electricians, mechanics, machinists, miners, railroad workers and construction workers, to name a few. Since the latency period for mesothelioma patients is approximately 40 years, most people diagnosed with mesothelioma or asbestos-related lung cancer in 2023 were exposed decades ago.

Although Colorado's mountainous terrain is home to many deposits of naturally occurring asbestos, the majority of asbestos exposure in Colorado occurred at industrial job sites.

**THE STEINBERG LAW GROUP**

The Steinberg Law Group has decades of proven experience and the resources to help victims of asbestos exposure and their families obtain the financial compensation they deserve. All of it.

Specifically, most Coloradans who have come in contact with asbestos were exposed in refineries, mines, factories and power plants. [www.mesotheliomaoptions.com](http://www.mesotheliomaoptions.com)
