Surge in the beauty industry, increase in awareness among individuals to give necessary attention to physical wellbeing, increase in the standard of living among people, and growth of the online retail platforms are expected to

drive the growth of the global electric massagers market. On the other hand, availability of alternatives is expected to hinder the growth to some extent. However, persistent technological advancements in electric massagers are expected to create ample opportunities for the industry.

The availability of non-electrical massagers is the key factor projected to hinder the growth of the electrical massage market. Furthermore, the low penetration of electric massagers in many underdeveloped countries is a challenging factor that can affect the Electric Massagers Market Growth. Some consumers perceive electric massagers as a premium product to relieve tension or to treat specific injuries are some of the factors which may hinder the growth of the electric massagers market.

In addition, massage treatment from massage specialist is another alternative of electric massagers. Approximately 47.5 million people had a total of 214 million massages in the U.S. in the year 2018. More than 50 million American adults have discussed massage therapy with their doctors or health care providers in the previous year. Therefore, availability of various alternatives is hampering the market growth of electric massagers.
