Self-injections are emerging as an attractive option for administering drug therapies at home. For instance, insulin-dependent diabetics and individuals suffering from arthritis generally adopt self-inject medication as it is an easy and a reliable method to self-administer drugs.

The global self-injections market is expected to witness significant growth during the forecast period due to the increasing incidence of auto-immune and chronic disease, and development of biologic drugs to treat autoimmune disease for which auto-injectors (a type of self-injection) are considered the best way of delivery. However, the high cost and sterility of injections hamper the market growth.
