Typically, asbestos exposure will have occurred sometime between the 1950s and the 1980s. Some of the most prevalent trades that encountered large quantities of asbestos include: power plant workers, maritime workers, industrial workers, plumbers, pipefitters, electricians, mechanics, machinists, miners, railroad workers and construction workers, to name a few. Since the latency period for mesothelioma patients is from 10 to 50 years, most people diagnosed with mesothelioma or asbestos-related lung cancer in 2023 were exposed decades ago.

Situated in the middle of the desert, Nevada's mountainous terrain includes a vast amount of naturally-occurring asbestos. For decades, mining activities throughout the state disturbed deposits and exposed thousands of Nevadans to breathable asbestos. Shockingly, it was not until 2013 that a geological study confirmed the presence of asbestos in rocks and soil throughout the state. Asbestos was used in the construction of many older Nevada casinos and
