

# What Does It Take to Be On A Technical Rescue Team

LOS ALAMITOS, CA, UNITED STATES,  
November 29, 2023 /

EINPresswire.com/ -- [Technical rescue](#) ultimately involves using specialized tools to secure the safety of those who might be in danger. It can include vehicle extrication, rope rescue, water rescue, or even [confined space rescue](#).

A trained [technical rescue team](#) is often used for this type of work because they are able to exceed the capabilities provided by emergency medical services.

DCS Technical Rescue Team

## Is A Career in Technical Rescue Right for Everyone?

If one is strong in spirit, caring, a team player, and a hard worker, then it may be that technical rescue is the right choice. Those who work in technical rescue are closet superheroes. If someone is a firefighter, then technical rescue team training can make them better at their job. It can also help to advance a career as well. Some industrial facilities have their own in-house rescue team. They are assembled to meet the various rescue scenarios that may arise at the facility. These teams are made up of normal, day-to-day employees who might have day jobs but who get extra training so that they can be on the rescue team.

## Enthusiastic Community

Rescuers tend to be passionate, and they are also very enthusiastic about the way that they work. Every single rescuer lights up when talking about their work, and the mere thought of what they do gives them great satisfaction in life.

## Ups and Downs

Knowing that someone is going to be able to enjoy the rest of their life as a result of a rescuer's actions is a nice feeling, to say the least. If considering a career in technical rescue, then there needs to be an expectation that not every rescue operation is going to have a good outcome. Technical rescue situations can easily turn into recovery operations before one is even able to

think or do anything. Sometimes bad outcomes happen even though the rescuers did their best. This is something that one has to think about because not everyone is able to deal with this kind of pressure.

### Common Characteristics for Someone Who Works on a Technical Rescue Team

To ensure a good fit for technical rescue, take a look at the following list of desirable characteristics.

Altruism - Having a selfless concern for others is a very strong motivator for those who work in rescue.

Team Player - Taking pride in teamwork is another fantastic quality.

Social - Some rescuers would say that the people whom they work with are their best friends.

Hard worker - Rescue does require a great deal of effort, sometimes an uncomfortable amount, but regardless, lives depend on the rescuers.

Strong of Spirit - There will come a time when decisions need to be made. Accepting responsibility for outcomes will be needed as well. If one approaches training and any operational responses with honesty and does everything they can, then there's no reason why they shouldn't be a good fit.

Adrenaline Junkie - Love adrenaline? Able to work under pressure? If 'yes,' then a job in rescue may be the right choice. There will be plenty of heart-pounding moments.

Closet Superhero - Those who have a heart of gold and want to help people are likely closet superheroes. This is someone who wants to do everything they can to ensure the safety and happiness of others. This is a fine quality, and it may mean that you are entirely suited to a job in search and rescue.

Technical rescue can be a daunting process, to say the least. If one takes the time to make sure that the career is the right fit, and looks into the job requirements properly, then they'll soon find that they are able to really feel comfortable in this line of work while also getting a great deal of satisfaction.
