Typically, asbestos exposure will have occurred sometime between the 1950s and the 1980s. Some of the most prevalent professions that encountered large quantities of asbestos include power plant workers, maritime workers, industrial workers, plumbers, pipefitters, electricians, mechanics, machinists, miners, railroad workers and construction workers, to name a few. Since the latency period for mesothelioma patients is approximately 40 years, most people diagnosed with mesothelioma or asbestos-related lung cancer in 2023 were exposed decades ago.

THE STEINBERG LAW GROUP

The Steinberg Law Group has decades of proven experience and the resources to help victims of asbestos exposure and their families obtain the financial compensation they deserve. All of it.

The numerous chemical facilities, industrial factories and construction sites in Tennessee have exposed thousands of local residents to dangerous levels of asbestos over the years.

Tennessee's vulnerability to flooding and other natural disasters exacerbates the problem as dormant asbestos can easily be often disturbed. Tennesseans should seek the assistance of asbestos abatement professionals if repairs and/or renovations are needed on any structure constructed prior to 1980. www.mesotheliomaoptions.com/contact
