## Bio-Pesticides: Shaping Sustainable Pest Control in Agriculture

In a bid to foster environmentally friendly and sustainable farming practices, numerous chemical companies are introducing bio-pesticides for pest, insect, and weed control in farmlands. These bio-pesticides leverage biological organisms, commonly referred to as antagonists, encompassing predators, parasitoids, and pathogens. Unlike traditional chemical pesticides, bio-pesticides offer a safer alternative, causing minimal harm to crops or plants.

Derived from natural materials such as animals, plants, bacteria, and specific minerals, bio-pesticides exhibit inherent advantages, being less harmful and more target-specific compared to their chemical counterparts.
