

Global General Crop Farming Market: Advancements in Microbe-Enhanced Seeds Propel Growth

The Business Research Company's global market reports are now updated with the latest market sizing information for the year 2023 and forecasted to 2032

LONDON, GREATER LONDON, UK, December 4, 2023 /EINPresswire.com/ -- The [global general](#)

“

The general crop farming market is expected to grow to \$548.45 billion in 2027 at a CAGR of 9.5%.”

*The Business Research
Company*

[crop farming market](#) has experienced robust growth, expanding from \$348.08 billion in 2022 to \$381.76 billion in 2023, reflecting a notable compound annual growth rate (CAGR) of 9.7%. Projections suggest continued expansion, with the market anticipated to reach \$548.45 billion by 2027, driven by an expected CAGR of 9.5%.

Microbe-Enhanced Seeds: A Game-Changer in Crop Production

The implementation of microbe-enhanced seeds has emerged as a transformative strategy, contributing to increased crop production and enhanced profitability. Notably, these seeds exhibit the remarkable ability to facilitate crop growth even in drought conditions. Functioning akin to beneficial bacteria in the human intestine, these microbes reside on the plant's surface and within plant tissue. For instance, the treatment of cotton seeds with beneficial microbes, a development by Indigo Agriculture, has proven successful in producing cotton plants without resorting to genetic modification. This innovative approach is already in use across 50,000 acres in five southern states of the USA. Monsanto, another major player in agriculture, has also introduced several microbial products, further emphasizing the growing significance of this technology.
