Cleanroom apparel is specifically developed for workers that need to enter cleanrooms. The concentration of airborne particles is regulated in cleanrooms. These airborne particles are filtered by filters built into the room. Filters in systems like a laminar airflow cabinet force the air to travel vertically. Cleanrooms are primarily utilized in the production of semiconductors, computer chips, pharmaceuticals, and a variety of other products. People and their activities, clothing and/or accessories, supplies, and filters are all potential sources of contamination in the cleanroom. The room should be inspected on a regular basis to prevent contamination from employees, and correct cleanroom clothes should be worn within these chambers.

“ Cleanroom Apparel Market anticipates robust growth driven by the demand for contamination control in pharmaceuticals, electronics, and healthcare industries globally”
