

Immunohistochemistry Market Expected to Reach \$4.5 Billion by 2031 | CAGR of 6.5%

Immunohistochemistry market report provides a quantitative analysis of the market segments, current trends, estimations, and dynamics.

PORTLAND, OREGON, UNITED STATES, December 11, 2023 / EINPresswire.com/ --

[Immunohistochemistry Market](#) size was valued at \$2.4 billion in 2021 and is estimated to reach \$4.5 billion by 2031, growing at a CAGR of 6.5% from 2022 to 2031. Immunohistochemistry

is a technique that is used to diagnose numerous chronic illnesses like cancer and cardiovascular and infectious diseases. It is a highly sensitive method that allows the localization of antigens within a cell or a tissue with high resolution. The method is based on the use of a primary antibody that specifically binds to its complementary antigen.

On the basis of product, the immunohistochemistry market has been segmented into antibodies, reagents, equipment, and kits. In 2021, the antibodies segment accounted for the largest share of the market. The dominance of this segment can be attributed to an increase in use of primary and secondary antibodies in immunohistochemistry tests for the diagnosis of disease.

On the basis of application, the diagnosis segment exhibited the highest growth in 2021 and is anticipated to lead during the forecast period, owing to an increase in the prevalence of various

Depending on the end user the immunohistochemistry market is segmented into hospitals & diagnostic laboratories, academic & research institutes, and other end users. In 2021, the hospitals & diagnostic laboratories segment accounted for the largest share of 48.0%. The large share of this segment was attributed due to the increase in the number of patient visits to hospitals for diagnosis of various chronic diseases.
