Anaplastic astrocytoma is a rare, malignant brain tumor that arises from astrocytes, the supportive cells in the nervous system. Anaplastic astrocytoma can cause neurological symptoms such as headaches, seizures, changes in behavior and motor deficits that are treated with a combination of surgery, radiation therapy and chemotherapies.

The main types of anaplastic astrocytoma disease are Grade I, Grade II, Grade III and Grade IV. Grade I refer to anaplastic astrocytoma tumors that are the least aggressive and are considered benign and treated by surgical excision, routine monitoring and follow-up practices. The treatment options for anaplastic astrocytoma also include surgery, chemotherapy and radiation, categorized into pre-registration and clinical trial phases to be used by hospitals and clinics, retail pharmacies and online pharmacies.
