Hazardous area scales are weighing devices developed and approved for use in areas where the presence of flammable gases, vapors, liquids, combustible dust, or other hazardous chemicals poses a concern. These scales are critical in sectors such as petrochemical,

pharmaceutical, mining, and manufacturing, where accurate measurement of materials is critical for operations, quality control, and compliance. Hazardous area scales conform to strict safety regulations to reduce the danger of igniting or explosion in potentially explosive atmospheres. They are built with materials and features that reduce static charge accumulation and decrease the risk of sparks.
