## Prime determinants of growth

The event insurance market is driven by the increase in demand for event insurance, risk mitigation, and financial protection. In addition, increased awareness of risks fosters the growth of the market. However, the [high cost of event insurance hampers](#) the market growth. On the contrary, technological advancements and increase in demand for comprehensive coverage are anticipated to provide lucrative opportunities for the growth of the market.

## Covid-19 Scenario

The COVID-19 hurt the event insurance market. The pandemic resulted in increased claims and payouts as it resulted in the cancellation of conferences, concerts, trade shows, and sports events. In addition, insurers had to deal with numerous claims and pay substantial amount of money to event organizers to make up for the financial losses.

Overall, COVID-19 decreased the demand for event insurance and forced event organizers to

seek alternative risk management strategies and opt for comprehensive coverage including specific pandemic-related coverage. Hence, COVID-19 had a negative impact on the market altogether.

The general liability segment to maintain its leadership status throughout the forecast period

Based on type, the general liability segment held the highest market share in 2022, accounting for nearly two-thirds of the global event insurance market revenue, and is estimated to maintain its leadership status throughout the forecast period, as ample insurance coverage is required for events of all kinds and sorts, from weddings and trade fairs to conferences and music festivals, to be protected against any liabilities. Further, event organizers are seeking flexible and tailored insurance solutions to meet their specific needs. However, the professional liability segment is projected to manifest the highest CAGR of 15.4% from 2023 to 2032. The demand for professional liability insurance in the event industry has been growing as event organizers and professionals recognize the importance of protecting themselves against claims of negligence or errors in their professional services. The complexity and scale of events have increased, leading to a greater emphasis on professional expertise and the need for appropriate insurance coverage.

The bodily injury segment to maintain its leadership status throughout the forecast period

Based on coverage, the bodily injury segment held the highest market share in 2022, accounting for nearly three-fifths of the global event insurance market revenue. This is because event organizers are seeking more customized bodily injury coverage options that align with the specific needs of their events. Insurance providers are offering flexible policies that can be tailored to the size, nature, and risks associated with different types of events. This allows event organizers to select coverage limits, deductibles, and additional endorsements based on their unique circumstances. However, the property damage segment is projected to manifest the highest CAGR of 14.8% from 2023 to 2032, technologies such as event management software, real-time monitoring systems, and advanced security technologies are also used to enhance property protection and mitigate risks. Insurance providers are increasingly incorporating technology-driven risk management solutions and offer coverage options that align with these advancements.

The enterprises segment to maintain its leadership status throughout the forecast period

Based on end user, the enterprises segment held the highest market share in 2022, accounting for more than four-fifths of the global event insurance market revenue. This is due to the fact that insurance providers offer resources and guidance to assist enterprises in developing and implementing effective emergency response plans and communication strategies during events. However, the individual segment is projected to manifest the highest CAGR of 17.1% from 2023

to 2032, this is because insurance providers are increasingly offering risk management support and resources to individuals organizing events which includes guidance on safety protocols, risk assessments, and best practices to mitigate potential risks and reduce the likelihood of accidents, injuries, or property damage during the event.

North America to maintain its dominance by 2032

Based on region, North America held the highest market share in terms of revenue in 2022, accounting for around two-fifths of the global event insurance market revenue. This is because the event insurance market in North America is witnessing increased adoption of technology-driven solutions. Insurance providers are leveraging advanced technologies such as data analytics, digital platforms, and automated underwriting processes to streamline operations, enhance customer experience, and improve risk assessment. However, the Asia-Pacific region is expected to witness the fastest CAGR of 16.7% from 2023 to 2032, and is likely to dominate the market during the forecast period. This is attributed to the increase in event activities across Asia-Pacific. Event organizers are increasingly becoming aware of the potential risks and liabilities associated with organizing events and seek coverage that protects them from financial losses arising from accidents, injuries, property damage, or third-party claims.
