

Innovation, Not Complication

The Adventurer Semi-Micro balances have lab work down to a real science

WROCLAW, DOLNOŚLĄSKIE, POLAND, December 27, 2023 /EINPresswire.com/ -- OHAUS Corporation, a leading worldwide manufacturer of weighing products, laboratory equipment and analytical instruments announced the launch of the new ADVENTURER series Semi-Micro balances, providing additional functionality, improved data reporting, and increased reliability.

Under the Hood

The Adventurer Semi-Micro balances are powered by the Adventurer AX operating system, which provides new capabilities, more functionality, and increased precision. One of the most important features is the addition of 3-level user management, which is critical in highly regulated industries such as pharmaceuticals and other markets requiring strict traceability. The Adventurer Semi-Micro also includes specialized weighing modes, improved stabilization, multiple connectivity options (including USB connections), and AutoCal mode—“automatic calculation”—which improves reliability.

The Workhorse

Designed for day-in, day-out durability, the Adventurer Semi-Micro balances feature large weighing surfaces, and a space-saving draftshield design which makes it ideal for use in labs, classrooms, and industrial environments.

Making it all Look Easy

The Adventurers are equipped with nine application modes and automatic features that eliminate the need to do several manual calculations, saving time and improving workflow. The color touchscreen is intuitive and easy to use, even while wearing protective gloves. The Adventurers also have six mechanical keys that provide tactile feedback and allow the operator to have quick access to repetitive operations such as tare, zero, calibration, and print.
