Increased Demand Due to Health Conditions:

The rise in the incidence of obesity and arthritis is a significant driver for the veterinary orthopedic implants market. Obesity and arthritis in pets lead to bone-related issues, including fractures, adversely impacting overall pet health and potentially shortening their lifespan. A report from Banfield Pet Hospital in the USA noted a 66% increase in osteoarthritis cases in dogs and a 150% increase in cats. Moreover, 52% of dogs and 41% of cats with osteoarthritis were

found to be overweight or obese. This surge in health conditions drives the demand for veterinary orthopedic implants.

Investment in 3D Printing Techniques:

Companies in the veterinary orthopedic implants market are actively investing in 3D printing techniques for creating implants, bone models, and surgical guides. This innovative approach streamlines surgical procedures, reducing time and costs while eliminating engineering complexities. Langford Veterinary Services, in collaboration with CBM, a UK-based provider of veterinary services, has treated dogs with bone deformities using 3D printing. CBM produces 3D printed models of animal implants using titanium Ti6Al4V EL material, contributing to the growing trend of 3D printing in the veterinary orthopedic implants market.

Regional Market Dynamics:

In 2022, North America dominated the veterinary orthopedic implants market, with Western Europe following as the second-largest region. The comprehensive global coverage includes Asia-Pacific, Western Europe, Eastern Europe, North America, South America, the Middle East, and Africa.
