Medical feed additives are various types of products used in animal nutrition to improve the nutritional content and quality of feed, or to improve the health and performance of animals. They help improve the nutritional content and quality of feed, resulting in higher productivity and disease prevention.

The main types of medical feed additives are antioxidants, antibiotics, probiotics, prebiotics, enzymes, and amino acids. The antioxidants refer to the feed additives that are fed to the animals for nutrition. The different mixtures include supplements, concentrates, premixed feeds, and base mixes. The various classes include type a, type b, and type c. These are used by different livestock, such as ruminants, poultry, swine, and aquaculture.
