A military satellite is an artificial earth satellite used for military missions such as intelligence gathering, navigation, and military communications. The capabilities of military satellites include

secure in-theater communications, weather and navigational data for ground, air, and fleet operations, as well as threat warning.

The main types of military satellites are small satellites and medium-to-heavy satellites. The various types of payloads include communication payload, navigation payload, imaging payload, and others that are used for intelligence, surveillance, and reconnaissance (ISR), communication, and navigation. A satellite payload refers to the components of a spacecraft that are specifically dedicated to producing mission data and relaying that data back to Earth.
