Microprocessors are controlling units of an integrated circuit that is capable of performing arithmetic and logic operations. Microprocessors fetch, decode and execute operations and communicate with other devices connected to them. A microprocessor consists of an ALU, a register array, and a control unit.

The main types of microprocessors are arm-based mpus and x86-based mpus. The ARM-based RZ microprocessor family integrates the most advanced peripherals, the largest embedded memory available, and a rich proprietary and commercial 3rd party software ecosystem. They are built on Renesas' heritage, RZ is designed to be as easy to use as a conventional microcontroller, making next-generation human-machine interface and high-end industrial applications a reality. The microprocessors are used in PCs, servers, mainframes, tablet, cell phone and embedded MPUs by various end-user industries such as are communication, consumer electronics, automotive and manufacturing.
