A liquid biopsy is a quick and painless substitute for surgical biopsies that allows medical professionals to learn a lot about a tumor from a small blood sample. A liquid biopsy is a diagnostic test performed on blood to detect the presence of any cancerous cells in the blood. It is used to detect cancer at an early stage.

The main product types of liquid biopsy are assay kits, instruments, and services. Assay kits provide the reagents needed to conduct analytical tests for the measurement of specific analysis in industries such as food, cereals and dietary fiber, dairy, analytical laboratories, animal feed and nutrition, biofuels, biotechnology, wine, malting and brewing, and research. The various clinical applications include early cancer screening, therapy selection, treatment monitoring, and recurrence monitoring orthopedics that are used by reference laboratories, hospitals and physician laboratories, and academic and research centers.
