Fertility treatment is a medical treatment provided to a man or a woman to increase their chances of bearing an offspring. It is used to treat infertile patients. Hormone and ovulation-supporting medicines are frequently used in fertility treatments, sometimes in conjunction with minor surgical procedures.

The main product types of fertility are reagents, and equipment. A reagent is a material or compound that is added to a system to produce a chemical reaction or to determine whether or not a reaction occurred. The treatments are performed on female and male in fertility clinics, hospitals, surgical centers, and clinical research institutes.
