Organic vegetable farming refers to the method of crop production that involves the use of biological materials to prevent the use of synthetic pesticides, genetically modified organisms, antibiotics, and fertilizers. Organic farming provides high-quality and healthy food to humans while protecting the environment from pollution, soil degradation, and erosion to optimize biological productivity.

The main types of organic vegetable farming are pure organic farming and integrated organic farming. Integrated organic farming is a zero-waste, cyclical process in which waste products from one operation are recycled into nutrients for other operations. The various methods include composting, crop rotation, cutting, mulching, polyculture, soil management, and weed management that are used for protected crops, salads, green vegetables, root crops, potatoes, and others.
